3. Executive summary

3.1. General progress

The inception of Project LIFE RE-WEEE - LIFE14 ENV/GR/000858 "Development and demonstration of Waste Electrical and Electronic Equipment (WEEE) prevention and reuse paradigms" was set at 1st of January 2016, afterwards EC approval of the proposal. The present Progress report constitutes the complete recording of the Project implementation for the period time January 2016 – November 2016, concerning the deliverables and the activities that took place within the reporting period.

At the beginning of the Project, three (3) management groups were established, in order to support the Administrative Council of the Project (ACP) to monitor and manage the Project implementation. During the reporting period, several meetings and contacts among the supporting groups were held, so as significant decisions to be received, in order to facilitate the proper progress of the Project. The contribution of the management groups was crucial, in order to tackle barriers that the Project group addressed.

During the current period, all "Implementation Actions" (Actions B) are in progress either at early or in advanced stage. The main activities that were foreseen to be implemented are the analysis of the donation/exchange platform specifications and requirements, the organization of Consultation Forums with the participation of the Project stakeholders, the development of the 1st issue of specifications and technical requirements for collection, transfer, sorting and storage of WEEE and the constitution of the call of interest for the Municipalities election for SCs operation. Within the reporting period, the donation/exchange platform is under development and the required specifications have been analysed with the contribution of experts in topics of preparing for reuse and reuse of EEE, during the 1st Thematic Forum. According to the approved proposal, 12 Consultation Forum (7 open forums and 5 thematic forums) should be organized in total. For the current period, 3 Forums have taken place (2 Open and 1 Thematic Forum), by exceeding the targets of participants. These forums were crucial for the project progress, as the main discussed topics were concerned the definition of SCs technical requirements and tackling of the barriers that have been addressed. Moreover, the 1st issue of specifications and technical requirements for collection, transfer, sorting and storage of WEEE was delivered, constituting the base for the activities definition that will take place in the SCs. Finally, there is a delay of 2 months for the constitution of the call of interest for the Municipalities election, due to legislative restrictions the Project team addressed, concerning authorization and spatial framework of SCs activities, as described in detail at the charter "3.3 Identified deviations, problems and corrective actions taken in the period" and in the corresponding Action B.5 at the Technical part of the present report. Implementation Actions are followed by supporting actions, such as state-of-the-art report (Action A.1) and dissemination actions (Actions D), by providing the base for the requirements for SCs operation and development of the donation/exchange platform and with the communication of the project progress and result to public and stakeholders.

The Project progress is monitored and managed within Actions E ("Management and monitoring of project implementation progress"), concerning the project progress and the environmental impact, by calculation of CO₂ emissions, as prescribed in the approved Grant Agreement (GA). Project implementation is progressing smoothly, as it is recorded to the monthly reports that are submitted to the Monitoring Team Auditor.

3.2. Assessment as to whether the project objectives and work plan are still viable

Project viability is ensured through the continuous optimization of the project work plan by the Project Committees. No significant delays and problems have been observed during the project implementation. Even though the project progress is in an early stage, since the most significant activities are planned to be implemented at the 2nd year of the project, in some cases the approved objectives of the project have been achieved in a satisfactory level during the actions implementation.

Deviations in the foreseen timetable that have been performed, described analytically in the corresponding chapters in the present report, do not affect the overall implementation of the actions and the achievement of the project objectives.

Moreover, the management of project resources is smooth, with only minor changes among the approved amounts per action in the same budget line, but without affecting the overall consumption of the instalment payment.

Finally, the objectives of the project promote EEE re-use and WEEE preparing for re-use. This clearly falls under the existing EU targets and priorities, concerning reduction of wastes and maximization of re-use, as prescribed in the current EU legislation and the 7th Environment Action Programme (EAP) to 2020. The objectives of the project fall also under the new EU Action Plan for the Circular Economy and its basic principles.

3.3. Identified deviations, problems and corrective actions taken in the period

Within reporting period, no significant problems and delays were faced during the overall Project implementation. Deviations from the foreseen timetable were addressed during individual Actions progress and the management groups of the Project was tackled them sufficiently. The delays that have been occurred have no impact to the overall progress of the Project.

The problems that Project team faced concern technical and financial issues and are described in detail at the relative chapters. A brief description of most remarkable problems are referred below:

Technical issues:

- The Project team decided to release an integrated questionnaire concerning Actions A.1 and B.1, since a target group of stakeholders was common. Afterwards, in countries where prevention of WEEE production and preparing for re-use procedure are in early stage (such as in Greece and Serbia), the integrated questionnaire could not be answered, as specific data concerning procedures of preparing for re-use cycle are requested (such as number of employees, quantities of reused equipment etc). HUA that was responsible for Action A.1 implementation proceed in releasing of a modified questionnaire, after approval by the Project team, concerning the collection of more relevant data corresponding to Action A.1.
- A delay of 2 months has occurred in Action B.5, concerning the call of interest for the site selection in order the two (2) SCs to be settled down and to operate. The Project team faced several obstacles, due to the fact that SCs operation is innovative in Greece and the National legislative framework (M.D. 1958/2012) by the start of the project was not sufficient in order to define the type of the environmental permit and procedures required for the authorization of such type of facilities. Therefore, after HRA's communication with the Department of Recycling Alternative Management of the Ministry of Environment & Energy (YPEN), a modification proposal by the second was

5

- issued to the corresponding Department of Environmental Authorization of "YPEN" and proceeded in amendment of the framework as MD 37674/2016 (7.2.16 M.D. 37674/2016 (ΦΕΚ 2471/B/10-8-2016)), in order to classify SCs in the relevant group of facilities and to define the specific environmental authorization requirements and procedures. Detailed description of the above legislation amendment procedure is referred at the corresponding Action B.5, at the Technical part of the present report.
- Additionally, the current National Land Use Planning restricts the settlement of waste management facilities such as SC, outside the districts of the defined Urban Plan or inside industrial areas accordingly. To address the restrictions of SCs settlement, attempts took place by LIFE RE-WEEE Project Team, represented by HRA, through communication with the General Secretariat for Regional Planning and Urban Development of "YPEN", in the context of the development of spatial planning framework of Green Recycling Centers, in order SCs to be allowed settled down within the Urban Plan's districts, combined with Green Recycling Centers or in adjacent sites, thus the citizens could be also served by SCs (7.2.14 B.5 Proposal for SCs spatial framework – e-mail). However, the combination of spatial planning framework of Green Recycling Centers with SCs was not feasible due to the activities that take place in SCs. Therefore, the Project Team proceed with the current legislation spatial framework, to avoid further delays. However the Project Team continues to make efforts for the spatial planning of SCs with the cooperation of the General Secretariat for Regional Planning and Urban Development of "YPEN", to facilitate the development of further SCs, out of the Project frame. As the restriction of SCs settlement outside the districts of the defined Urban Plan or inside industrial areas results in limited availability of proper infrastructures for SCs operation, delays concerning the definition of the required technical specifications (7.2.12 B.5 Issue of infrastructure and operation technical requirements of SCs) of SCs that constitute part of the Management plan had been occurred, in order to be in compliance with the National framework of authorization. The addressed restrictions are described in detail at the corresponding Action B.5. This delay does not affect the overall progress of this Action, as the determination of the final proper SCs operation specifications are important for the expected results of the Project. After the technical requirements of SCs definition and the submission to the BoD of GF, according to the internal procedures of GF, that is responsible for the tender constitution, a period time of 1 - 1.5 month is required for the approval of the final technical requirements of SCs, and therefore the call of interest inception, that constitute Project milestone, and therefore the tender issue for the Municipalities election, that constitute deliverable of Action B.5, is estimated to be launched within January 2017.

Financial issues:

• Personnel budget concerning GF partner is divided to permanent and additional staff. GF is composed by secondment employees from other public bodies and according to the National Law 3889/2010, amended by the Law 4030/2011, employees' paid salaries are by the organisations of provenance. According to Monitoring team response (email 13/4/2016), since personnel costs of GF permanent staff are incurred by another entity, then this is considered an 'in-kind contribution' and therefore are not eligible. This issue was confirmed also at the Annex – Financial Issues No 9 of letter from EASME by 11/7/2016 concerning the Monitoring Team visit. The additional staff employments were initiated at June 2016. For this reason, personnel costs of GF employees are deviated downwards from the foreseen budget.

4. Administrative part

The Administrative Council of the Project (ACP) is the official decision-making body of LIFE RE-WEEE Project, consists of one representative of each beneficiary. The role of the ACP is to monitor the delivery time of the reports, according to the GA, the organization of meetings, conferences and dissemination activities, the development of Progress reports (including Midterm and Final reports), guidance and monitoring of financial statement reports, according to E.C. guidelines, and the assessment of project progress by each action implementation. The Project Coordinator constitutes the link between the ACP and European Commission.

The ACP members are required to meet every 6 months (in total 8 times), or when the project progress requires, beginning with the kick-off-meeting that took place at 3/3/2016. The ACP members are referred at the GA. During the kick-off-meeting, the ACP recommendation was revised according to the following organization chart, and 3 supporting groups of the ACP were also recommended: Project Management Group, Quality Assurance and Quality Control Group and Carbon Footprint Group.

Project Management Group (PMG) undertakes supporting role to the ACP. One representative of each beneficiary constitute the PMG and are responsible for the daily monitoring and management of the Project.

The PMG is also supported by Quality Assurance and Quality Control Group (QA/QC Group) and Carbon Footprint Group (CFG), responsible for the determination and monitoring of Project Progress Indicators and the monitoring and assessment of each action carbon footprint, respectively.

The organization chart and the representatives that compose each individual group of Project are referred in the following diagram:

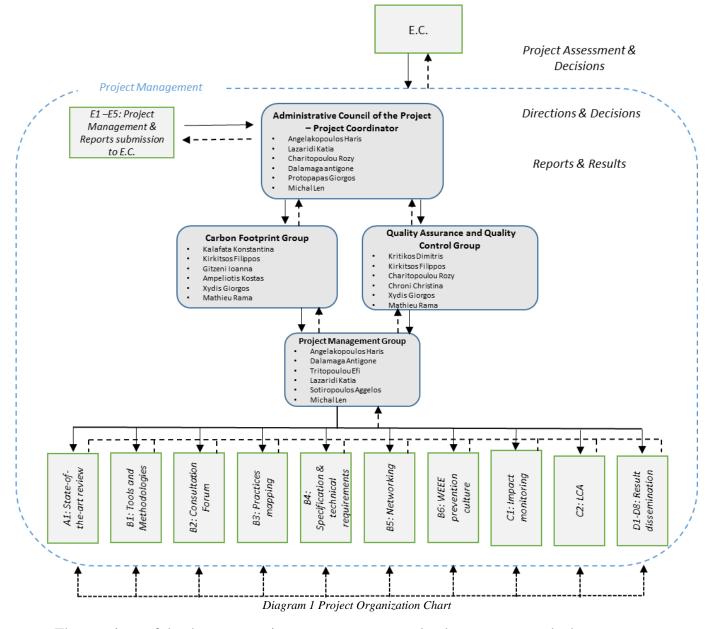

The meetings of the three supporting groups are not regular, but are convened when necessary for the proper project progress, while individual meetings of the involved beneficiaries take place to facilitate the implementation of the individual actions.

During the reporting time, the following meetings took place:

- 1st ACP meeting: 3/3/2016 (kick-off-meeting)
- 2nd ACP meeting: 13/6/2016
- 1st CFG meeting: 13/6/2016
- Partners meeting: 14/6/2016
- Partners meeting: 20/7/2016
- Partners meeting: 6/9/2016
- 1st QA/QC group meeting: 8/11/2016
- 3rd ACP meeting: 15/11/2016

8

Meetings among beneficiaries have been held during the reporting period, targeting to the continuous communication and information of partners for the progress of individual actions, are not included in the above list. In some case, teleconference communication with RREUSE representatives took place, resulting in saving recourses of the Project and reduction of Project Carbon Footprint.

During the reporting period, the following activities took place in the context of the project management:

- ✓ Signing of Grant Agreement, 1/12/2015
- ✓ Preparing and signing of Partnership Agreement
- ✓ 1st installment of E.C. contribution, 18/12/2016
- ✓ Development and delivery to Monitoring Team Audit 10 monthly progress report.
- ✓ Establishment of supporting groups for project implementation
- ✓ 1st Monitoring Team Audit, 23/5/2016
- ✓ Completion of all partners' timesheets
- ✓ Preparation and development of Progress report

The 1st Monitoring Team visit was held at 23/5/2016 at "Appliances Recycling S.A." offices. Representatives of all beneficiaries participated in this meeting (7.2.53 E.1 Participant list of Monitoring Team Audit). The issues raised by Monitoring Team visit were delivered to Coordinating beneficiary "Appliances Recycling S.A." as Annex of the EASME letter by the date 11/7/2016. Itemized responses to EASME letter are submitted at the present report as Annex 7.1.1 Response to EASME letter at 11/7/2016 of Monitoring Team visit.

Deliverables documents within reporting period

- Response to EASME letter at 11/7/2016 of Monitoring Team visit 7.1.1
- 7.1.2 Partnership Agreement ECOREC
- 7.1.3 Partnership Agreement GREEN FUND
- 7.1.4 Partnership Agreement HRA
- 7.1.5 Partnership Agreement RREUSE
- 7.1.6 Partnership Agreement HUA

5. Technical part

5.1. Progress per action

A. Preparatory actions

Action A.1: State-of-the-art review

Foreseen start date: January 2016 Actual start date: January 2016

Foreseen end date: June 2016 Actual (or anticipated) end date: August 2016

Status: Completed

Project a	actions	2016			2017 2018 2019

A1	Actual	•	•	•								

Progress

HUA was proclaimed responsible for the overall implementation of Action A.1, while ECYCLE, RREUSE, ECOREC, and GF had a supportive, and crucial role collection/review of the required data, taking interviews and editing of the reports. Action A.1 had a preparatory, but basic function in the implementation of the LIFE RE-WEEE project. It concerned the production of a State-of-the-Art Report (7.2.1 A.1 Del State-of-the-art report) on the WEEE reuse or preparation for re-use. This Report forms an information tank for the implementation of the Actions of groups B (implementation actions) and D (public awareness and dissemination of results). For instance, it has already contributed to the identification of the WEEE categories for the WEEE Sorting Centres (Action B.5, sub-action B.5.1), and it has been orally presented in the 5th International Conference "Industrial and Hazardous Waste Management" (27 – 30 September 2016, Chania – Crete, Greece – please refer to Action D.7).

The Report consists of three (3) parts:

I. The identification of initiatives and good practices in EE-28 (Sub-action A.1.1)

The first part presents more than twenty (20) WEEE prevention and preparation for reuse activities (initiatives, practices) that have been employed in Greece and at EU level until June 2016. Depending on the data availability, the activities have been evaluated upon environmental, economic and social criteria, such as their diversion potential, the reuse percentage, the difficulty of their implementation, their impact on the citizen's behaviours, and the number of jobs created. During the investigation of the aforementioned activities, it became obvious that Greece lacks such as initiatives, indicating the necessity for the implementation of the B Actions of the LIFE REWEE project.

II. The investigation of legislative facilitators and barriers, at national and EU level (Subaction A.1.2)

The second part of the State-of-the Art Report involved the investigation, evaluation and presentation of legislation facilitators and barriers at national and EU level. In order to analyse the current situation, approximately fifty (50) interviews (questionnaires) were taken and a desk study (review of more than forty (40) articles and reports) was held.

III. The recording of the available economic instruments, that promote the WEEE reuse and the preparation for reuse (Sub-action A.1.3)

The third part of the report, i.e. the recording of the available economic instruments, will facilitate the exploitation of the available data towards the development of more effective tools. Although various instruments are presented, special emphasis has been given on the Extended Producer Responsibility (EPR) systems, due to its high effectiveness and importance in WEEE management.

Since part of the stakeholders were the same with those in Action B.1, an integrated questionnaire of both Actions was distributed (7.2.2 Integrated Questionnaire A.1-B.1_En), according to Project team decision. So as Action B.1 is still in progress, the deadline for the completed questionnaires set defined in December 2016, and therefore the state-of-the-art report will be revised according the received feedback.

To proceed in feedback receiving, a modified questionnaire concerning Action A.1 was delivered in countries where prevention of WEEE production and preparing for re-use are in early stage (such as in Greece and Serbia), in order to collect more credible and closer to reality information (7.2.3 A.1 Questionnaire_EL, 7.2.4 A.1 Questionnaire_En). Moreover, stakeholders that are involved scientifically in re-use issues (e.g. academics) and are well aware of the corresponding legislative issues, were asked to complete the modified questionnaire of Action A.1.

Delays

The draft report was delivered in June 2016, and finalised 1,5 month later than the foreseen time-plan (August 2016), but this did not introduce any further delay to the subsequent Actions of the Project, neither did it affect its smooth implementation. 98% of the State-of-the-Art Report was completed by August 2016. The delay of the rest 2% was due to the recording of national legislation of other EU member-countries, as are reported in local languages and the delay of the interview responses.

The participating beneficiaries dealt with this obstacle effectively, using an integrated approach of the subject, and modifying the questions of the interviews. In September updated data about the reported practices were available. Therefore, the LIFE RE-WEEE consortium, decided to revise the State-of-the-Art report accordingly, and add the analysis of the new interviews (questionnaires).

Comparison with established targets

Indicators of Progress	Target	Achievement	Comments
State-of-the-Art report	June 2016	August 2016	The Report was revised in November 2016, in order to include updated data of initiatives, and analysis of interviews.
Reporting of good practices	20	21	
Legislative facilitations and barriers	50 interviews/questio nnaires	60 questionnaires were distributed. 48 Responses: • A.1 questionnaires/interviews: 30 • A.1&B.1 integrated: 18	60 are the questionnaires directly distributed. Many recipients are network-members and the questionnaires were forwarded to other members, with no calculable estimation of the exact distributed questionnaires.
Reporting of studies regarding economic tools	30	32

Progress

The progress of Action B.1 is performed within the scheduled timetable. RREUSE is responsible for Action implementation and collaborated with ECOREC, ECYCLE, HUA and HRA during the initial time period. Action B.1 is divided in three sub-actions, with only subaction B.1.1 to fall under the reporting period. RREUSE has been working on an inventory of existing measurement methodologies of WEEE re-use and preparation for re-use, according to sub-action B.1.1, started on March 2016. To perform this, three questionnaires (7.2.2 Integrated Questionnaire A.1-B.1_En, 7.2.5 B.1 Questionnaire for Producer Responsibility Organisations (PROs), 7.2.6 B.1 Questionnaire for Local Authorities) were developed aiming to gather data about calculation methods, categories of measured WEEE, input-output sources, measurement units used and other relevant information from three different groups of stakeholders: WEEE re-use centres (through RREUSE members), extended producer responsibility organisations (through the participation of ECYCLE and the WEEE-Forum – a consortia of WEEE EPR schemes in Europe) and local authorities (through RREUSE contacts with several local authorities associations related to waste management: ACR+, Zero Waste Europe and Municipal Waste Europe). One of the three questionnaires constitutes integrated version with Action A.1, as it was decided by the Project team, due to common part of stakeholders that the questionnaire was addressed to.

Additionally, data collection for B.1.1 & B.1.2 took also place through site visits of several RREUSE members WEEE treatment facilities (Envie (Strasbourg), Camara (Dublin), CF2D (Brussels), De Kringwinkel-Televil (Vilvoorde), De Kringwinkel-Ateljee (Ghent)) and meetings with stakeholders as well, described below analytically:

- EU Member States representatives (Greece, Germany, France, Spain, Belgium, Cyprus, Sweden, Estonia) negotiating the Circular Economy Package were invited by RREUSE to discuss a preparing for re-use target at the European level. The Spanish representative explained the calculation of the WEEE preparing for re-use target implemented in Spain.
- Monthly meetings with RREUSE members involved in WEEE management via the RREUSE WEEE-WG (minutes available upon request).
- Meeting with the largest extended producer responsibility organisation in Europe promoting WEEE re-use: Eco-Systèmes (France).
- ➤ Participation to CEN/CENELEC meetings on standards on collection and logistics and on preparing for re-use. This included 4 meetings on the collection and logistics standards and 6 meetings concerning the WEEE preparing for re-use standard. RREUSE participation in the standardisation meeting is possible via ECOS (the European Environmental Citizens Organisation for Standardisation). The results of some of these

discussions have helped also to inform the specifications development with respect to WEEE operation concerning collection, storage and sorting as outlined in the corresponding deliverable, submitted as Annex 7.2.11 B.4 Del 1st issue of specifications and technical requirements for collection, transfer, sorting and storage of WEEE.

Finalization of questionnaires lasted quite some time since it took place during the summer holiday period and that RREUSE needed to wait for the partners' comments before sending it to its contact list. Also, getting RREUSE members to actually answer to the questionnaire is quite complicated, since its sending happened just at the end of the RREUSE members' survey which already asked RREUSE members to answer to a lot of questions. However, the deadline for the B.1.1 sub-action is 03/2017, which still leaves time for RREUSE to collect more data about the existing measurement methodologies of WEEE re-use and preparation for re-use.

Delays

No delays have been performed during the Action implementation

Progress

The progress of Action B.2 is performed within the scheduled timetable. GF is responsible for Action implementation. Within the reporting period, 3 Consultation Forums (1 Thematic Consultation Forum and 2 Open Consultation Forums) in total were organised and took place. More specifically, the 1st Thematic Consultation Forum took place at 14/6/2016 in Harokopio

University facilities. The main theme of this Forum was the development of the WEEE exchange platform. The forum was attended by representatives of all the partners, the IT group of Harokopio University that are responsible for the implementation of the platform and experts in topics concerning the preparing for reuse and reuse of EEE, representatives from the fields of Social Economy, who gave examples of good practices on reuse issues, through teleconference. The relevant minutes are submitted as Annex 7.2.7 B.2 Minutes of 1st Thematic Consultation Forum. The participants list is included in the minutes of the 1st Consultation Forum are recorded in Table 3 Achievements of Action B.2 within the reporting period of this report.

The 1st Open Consultation Forum was organised by the project's team at 20/7/2016 at GF facilities. Before the Forum implementation, an informative letter (template at 7.2.10 B.2 Municipalities informative letter) concerning LIFE RE-WEEE short description and information about the 1st Open Consultation Forum organization, was delivered to all Municipalities of the 2 regions. More than 90 persons from 48 different bodies participated this Forum. The relevant minutes for this Forum are submitted as Annex 7.2.8 B.2 Minutes of 1st Open Consultation Forum, while the indicators of progress determining the success of this Consultation Forum are recorded in Table 3 Achievements of Action B.2 within the reporting period of this report.

The 2nd Open Consultation Forum was organised and implemented by the project's team at 22/9/2016 in Nea Triglia Chalcidice. More than 113 people from 58 different bodies participated this Forum. The relevant minutes for this Forum are submitted as Annex 7.2.9 B.2 Minutes of 2nd Open Consultation Forum, while the indicators of progress determining the success of this Consultation Forum are also recorded in Table 3 Achievements of Action B.2 within the reporting period of this report.

It should be stressed that the minutes submitted will comprise the Final Deliverable entitled "1st Annual report containing the Minutes of the Consultation Forum" which is to be completed by the 31st December 2016 and submitted with the Mid-term report on 31/10/2017.

This action is expected to progress smoothly throughout the implementation of the progress and according to the timetable set to the Grant agreement. Moreover, 2 more Consultation Forums, are expected to be implemented until the next reporting period.

Delays

No delays have been performed during the Action implementation

Action B.3: Mapping WEEE reuse and preparation for reuse practices and initiative in Greece

Foreseen start date: July 2016 Actual start date: July 2016

Foreseen end date: June 2018 Actual (or anticipated) end date: June 2018

Status: In progress

Progress

Action B.3 is in progress according to the foreseen timetable. HUA is responsible for this Action implementation. Within the first three months of Action B.3 implementation, the LIFE RE-WEEE consortium was tasked with preparative, yet important tasks, which will facilitate the smooth development and completion of Sub-actions B.3.1 and B.3.2. More specifically, the following activities per Sub-action were conducted:

Within sub-action B.3.1, investigation of the available databases, as well as discussions for the structure of the relevant questionnaire among HUA, ECYCLE, ECOREC, and GF took place, in order to collect reliable data for the elaboration of the report (deliverable of March 2018). At the same time, the development of a database with information (contact info, activity etc.) about individual activities in the WEEE reuse and preparation for reuse sector is in progress.

In the context of sub-action B.3.2, a desk study for the data sources relevant to the WEEE amounts and prevention measurements has started.

For the elaboration of Action B.3, the methodology for the measurement of reuse / preparing for reuse which is being developed through Action B.1, will be coined. ECYCLE and ECOREC are set to provide the required data from retailers and social initiatives, respectively, while the

15

GF will contribute to the mapping of WEEE reuse and preparation for reuse practices and initiatives in Greece and the delivery of the relevant report.

Delays

No delays have been performed during the Action implementation

Comparison with established targets

Indicators of Progress	Target	Achievement
A report about WEEE reuse and preparation for reuse practices and initiatives in Greece	3/2018	In progress (A list of potential interviewees is being developed / Discussion about the questionnaire structure has started)
A report about the impact of the deep economic crisis in Greece on the WEEE generation	6/2018	In progress

D4	Actual	•	•	•	•	0	0	0	0	0	0	0	0	

Progress

Action B.4 is in progress within the foreseen timetable. HRA is responsible for this Action implementation. Action B.4 is divided in three sub-actions, with only sub-action B.4.1 to fall under the reporting period. A research for data collection was conducted in order the 1st issue of specifications and technical requirements for collection, transfer, sorting and storage of WEEE to be drafted (7.2.11 B.4 Del 1st issue of specifications and technical requirements for collection, transfer, sorting and storage of WEEE). The specifications development was based on current Best Available Techniques (BAT), developed specifications in other European countries (PAS, OVAM, Wrap) and developed or under submission European standards (e.g. WEEELabex, CEN-CENELEC). HRA proceeded in the corresponding standards purchase, in order to collect information for the development of the1st issue of requirements. For the specifications drafting, Project Team took into account the parameters of Greek situation, since for the first time requirements concerning preparing for re-use procedures are being developed. HRA cooperated closely with ECYCLE, taking under consideration the recommendations of the rest of the partners. This includes many meetings that took place between HRA and ECYCLE, as well as round table discussions with all the partners.

A problem addressed was the translation and performance in Greek of English terminology, so that to not overlap or being confused with the existing Greek legislation terminology. This problem was solved upon discussions among the partners by consulting current National Legislation.

Since RREUSE experience in preparing for re-use procedures is very important, an executive summary of under-development requirements was prepared, in order RREUSE to could contribute in the deliverable preparation.

Delays

No delays have been performed during the Action implementation

Comparison with established targets

Indicators of Progress	Target	Achievement
An issue of specifications and technical requirements for collection, transfer, sorting and storage of WEEE	9/ 2016	Delivered

B5	Foreseen																
55	Actual	•	•	•	•	0	0	0	0	0	0	0	0	0	0		

Progress

ECYCLE is responsible for this Action implementation and all partners contribute to the progress. Action B.5 is divided to 6 sub-actions:

Sub-action B.5.1, concerning the development of SCs Management Plan, started on March 2016 by collecting information about siting, operation and required standards for the authorization, settlement and operation of WEEE Sorting Centers, where preparing for reuse activities take place. This research also includes the definition of the spatial and infrastructure specifications for SCs operation. ECYCLE, with the contribution of HRA, proceeded in the determination spatial specifications within the period time of March – July 2016, in order to be presented at the 1st Open Consultation Forum (see Action B.2). The Project Team faced legislative constrains concerning the SCs authorization. The current National legislation puts restrictions in the settlement of waste management facilities (collection, sorting, storage, treatment, disposal etc.), such as SC, outside the districts of the defined Urban Plan, according to PD 31/1985, or inside industrial areas according to PD 166 D/1987. In the context of the development of spatial planning framework of Green Recycling Centers, communications between HRA, as representative of the LIFE RE-WEEE Project, and the General Secretariat for Regional Planning and Urban Development of Ministry of Environment and Energy ("YPEN") took place, in order in order SCs to be allowed settled down within the Urban Plan's districts, combined with Green Recycling Centers or in adjacent sites (7.2.14 B.5 Proposal for SCs

spatial framework – e-mail). Due to the additional activities that take place in SCs (such as storage), they could not be included in common spatial framework with Green Recycling Centers. Therefore, ACG proceed according to the current Legislation restrictions, in order to accelerate the procedure for SCs development. However, the Project Team continues to make efforts for the spatial planning framework of SCs under cooperation with the General Secretariat for Regional Planning and Urban Development of YPEN, to facilitate the development of further SCs, out of the Project frame.

Moreover, environmental authorization restrictions set by the National Legislation were not fixed by the start of the project. Project Team, represented by HRA proceeded in amendment proposal of the M.D. 1958/2012 concerning authorization issues of SCs, in order to be included in the present legislative framework. HRA is supervised by YPEN. With the cooperation of the Department of Recycling and Alternative Management of YPEN, through oral communications mainly, issued modifications for the M.D. 1958/2012 to the Department of environmental authorization of YPEN. The final proposal was sent at 1/6/2016 (7.2.15 B.5 Final proposal for MD 1958/2012 modification – e-mail). According to M.D. 1958/2012 amendment, which entered into force at 10/8/2016 by M.D. 37674/2016 (ΦΕΚ 2471/B/10-8-2016) (7.2.16 M.D. 37674/2016 (ΦΕΚ 2471/B/10-8-2016)), SCs are now included in Group 4 "Environmental Infrastructure Systems" as "Sorting Centers of Electrical and Electronic Equipment (WEEE) - Including facilities for preparing for reuse of WEEE (category "9γ"). The corresponding modification is referred at page 24 of the document (yellow marked).

Additionally, by the 1st Consultation Forum (20/7/2016), the Project Team addressed constrains by Municipalities side, concerning the availability of suitable properties that are in compliance with the current Legislation and the defined specifications - although 7 Municipalities had declared interest by sending supporting letters (included in the annex at the proposal submission) - the Political Will that is required for the Municipalities participation to the call of interest and their commitment for the infrastructure providing.

As it was described at Action B.2, Municipalities of regions of Attika and Central Macedonia were informed for the LIFE RE-WEEE Project by an informative letter (template at 7.2.10 B.2 Municipalities informative letter). Afterwards, for the period time of July – November, visits to Municipalities of Attika and Central Macedonia (7.2.17 B.5 Municipalities visits) that have already declared interest for the SCs' installation within their boundaries, took place by representatives of all Beneficiaries, for detailed information regarding the spatial required specifications and visits of contingent available properties, in order ECYCLE to proceed in modifications of the SCs technical specifications, in order to be adapted to Greek reality. Informative technical material was sent to Municipalities when it was required, before the visits. An evaluation document was developed in parallel for the recording of available properties and the Municipalities declaration of interest, in order to facilitate in current situation assessment and the proposal of alternative solutions by the ACG. At the same time, the Project team proceed in extensive market research through brokers, to facilitate the definition of SCs technical specifications. The ACG suggested as alternative solutions the providing of leasing infrastructures by an individual or partnership of Municipalities. Moreover, ACG makes efforts in order regions of Attika and Central Macedonia to contribute to SCs operation and support LIFE RE-WEEE projects.

The Management Plan of the SCs will be revised continually according to the addressed constrains and obstacles, till the final specifications to ensure the proper operation of the SCs. Sub-action B.5.2 includes the conduction of call of interest for the Municipality and the operation contractor company selection. In the context of Municipality selection, the QA/QC Group, based on the draft Management Plan, defined the SCs' technical requirements of the informative issue, in order to be included at the call of interest issue by GF. SCs technical

specifications were based to a significant extent to existing industrial buildings specifications, as these are defined by the National building and planning legislation, as also raised after an extensive market research through brokers, by the Project team. The issue of SCs' technical requirements includes the following topics, according to the approved proposal:

- Definition of SCs capacity
- Definition of workplaces requirements
- Definition of WEEE categories that the SCs will manage
- Definition of WEEE resources for the SCs
- Definition of the activities that take place in the SCs

Afterwards, ACP meeting was held to define the final evaluation criteria, in order to be able to assess the available areas that comply with the current legislation restrictions. During this meeting, an Advisory Scientific Committee (ASC) was recommended by representatives of each beneficiary, except GF. This Committee role is to support, if necessary, the Evaluation Committee of GF concerning technical issues for the SCs siting and operation, in the case it is decided by the Green Fund internal procedures. The final informative issue of SCs technical specifications (7.2.12 B.5 Issue of infrastructure and operation technical requirements of SCs), will be submitted to GF Board of Directors at early December, followed by the proposed evaluation mechanism system (7.2.13 B.5 Evaluation mechanism system), through a "rapporteur letter" by ASC. According to the internal procedure of GF, Board of Directors will proceed in the approval or in the amendment of the informative issue and evaluation criteria. The Evaluation Committee of GF assumes full responsibility for the final form of the informative issue, as well as for the evaluation of results. It is estimated that the call of interest will be launched within January 2017.

In parallel, contacts between Legal Departments of ECYCLE and GF have taken place in order the procedure of call of interest to be defined, due to National Legislation amendments concerning the public body completion procedure. GF has already proceed in the development and drafting of the call of interest documents (invitation of tender and online platform for submission of corresponding documents).

The description of the contract between the Green Fund and the selected Municipalities concerning the equipment provision for the SC's operation has been defined by the legal department of GF. The equipment selection will arise by separate contests conducted by GF.

All the specifications described in the Action B.4, will be available for the participant Municipalities to the call of interest.

All Municipalities will be invited to the 3rd Open Consultation Forum (Action B.2), to be informed in detail regarding their participation in the call of interest. It is estimated that the 3rd Forum will take place within January 2017 at Green Fund offices after the call of interest will be launched.

Sub-action B.5.3 concerns the installation and operation of SCs according to the defined specification and requirements. This sub-action does not fall within the reporting period.

In the context of sub-action B.5.4 educational activities to SCs will take place for the proper management practices concerning WEEE preparing for re-use procedures. This sub-action does not fall also within the reporting period.

Finally, Sub-actions B.5.5 and B.5.6 that will be implemented after SCs operation concern public and stakeholder information regarding the operation of SCs and relative issues to WEEE prevention and proper WEEE management procedures.

Delays

The launched of call of interest for the Municipalities selection concerning SCs siting deviates from the scheduled timetable by 2 months. This deviation is due to Legislative restrictions or lack of legislative framework regarding SCs authorizations issues. These parameters had impact to the available properties of Municipalities in order to be compliance to National Legislation. Moreover, the respond time for the Municipalities in order to declare their interest concerning the participation in the LIFE RE-WEEE project depends on the level of their Political Will and this for the majority takes long time. Moreover, due to National Legislation restrictions, determination of the evaluation criteria and SCs spatial specifications were also delayed. Therefore, approval of contest evaluation criteria by the Board of Directors of GF is delayed, since the final informative issue is required to be deposited for approval, according to their internal regulations. The evaluation criteria and the informative issue will be finalized in early December, where the 4th ACG meeting will take place.

According to internal procedures of GF, a period time of 1 - 1.5 month is required for the approval of the evaluation mechanism system, proposed by ASC.

This delay is not expected to affect the proper implementation of the project, as the determination of the final proper SCs operation specifications are important for the expected results of the Project.

Action B.6: Promotion and support of the WEEE prevention culture in Greece

Foreseen start date: April 2016 **Actual start date:** March 2016

Foreseen end date: December 2018 Actual (or anticipated) end date: December 2018

Status: In progress

Project	Project actions 2016				2017					20	18		2019	
В6	Foreseen													
50	Actual	•	•	•	•	0	0	0	0	0	0	0	0	

Progress

Action B.6 is in progress as foreseen to the timetable. ECOREC is responsible for the overall Action implementation, with the contribution of all partners. Action B.6 is divided to two (2) sub-actions:

Sub-action B.6.1, concerning design and development of a collaborative web-based platform for EEE donation and exchange, is set to be developed by HUA in two stages, corresponding respectively to Activities B.6.1.1 and B.6.1.2. The first stage, which concerns the design and development of the LIFE RE-WEEE platform, is in progress, while its deliverable (the pilot LIFE RE-WEEE platform) is expected to be completed by the 31/3/2017, as anticipated. The implementation of the second stage will follow as anticipated in April 2017.

More specifically, throughout the reporting period (01/01/2016 - 30/11/2016) the following tasks were completed.

The first step for the implementation of B.6.1.1 was the requirements and design analysis of the collaborative web-based platform, which consisted a milestone of the Project. The milestone was achieved in June 2016, as anticipated. In order to define the requirements of the collaborative platform, the consortium of the Department of IT and Telematics (HUA) investigated the existing platforms for goods/service exchange and donation, and contacted the coordinators of the project partners, the members of the management teams of LIFE RE-WEEE and experts on EEE and WEEE. Last, but not least, the consortium suggested a Thematic meeting regarding platforms, in the framework of Action B.2, which took place at 14/6/2016 (the minutes of the meeting and further details are provided in Action B.2).

A report with the outcomes of the analysis was delivered to the coordinator in the end of June 2016 (7.2.18 B.6 Analysis of platform requirements).

In short the aforementioned requirement analysis report presents:

- The aim of the platform, and its use on an individual or society level,
- The methodology that will be used in order to enhance and implement the concept of exchange and donation,
- Description of the user interface, and the platform-user interaction,
- · Basic user requirements, and
- The platform's functionality (i.e. the services that are to be provided to users, a user-role categorization and the available categories of EEE).

Since the completion of the requirements analysis, HUA has been tasked with the development of the platform architecture, which consists of two distinctive parts: 1) the main web platform with which the external users will interact, and 2) an administrator console accessible solely to the platform's administrator(s). Both parts are designed and being developed with Python language standards through the use of the Django framework.

The development of the front-end interface is at initial stage, including a simple user registration capability, an NGO registration capability, and registration to the platform through social networking media (Facebook, Twitter and Google Plus). The user may have a profile page within the platform, which (s)he can update his/her data (email account, password, location and avatar). The user also has access to incoming messages from other users, to profile notifications, and to donations.

The collaborative platform will be delivered in the end of March 2017, as anticipated.

Sub-action B.6.2 concerns implementation of six "Learn to Repair Events". The first repair event is scheduled for December 2017. However, several actions have been taken within the context of this sub-action. Namely, in June 2016, a meeting was held with The "REPAIR CAFÉ" foundation's president and Director to discuss synergies between the events to be held in Greece and Repair Cafés' model, as well as the tools available in Greek to attract a wider use. As well, several discussions were held with the "ANAKYK $\Lambda\Omega\Sigma$ H Σ THN Π H Γ H"

("Recycling at Source"), a social enterprise from Patra that has implemented the first Repair Café in Greece in the last 5 months. The project hopes to collect initial data from these events to see what type of EEE were the ones most brought to the events.

Furthermore, contact was also made with the "Restart Project" which promotes "pop-up parties" for electronics repair events. Discussions are currently underway to see what synergies may be created between the "Restart Project" and the LIFE RE-WEEE project, in order to find out how the LIFE RE-WEEE repair events can collect data and indicators that will be compatible with the "Restart Project" data-collection database and possibly to use the data indicators and any other available source to narrow down the household appliances which are most repairable and the range of the appliances to be included in the repair guide overview.

Delays

No delays have been performed during the Action implementation

Comparison with established targets

Indicators of Progress - Milestone	Target	Achievement
Requirements and design analysis of the	June 2016	Milestone completed
collaborative web-based platform		The platform is under development.

Table 7 Achievements of Action B.6 within the reporting period

Progress

Action C.1 is in progress as foreseen to the timetable. ECYCLE is responsible for this Action implementation. The project team defined the environmental indicators concerning "B: Implementation actions", based on the Project Specific Indicators that have been submitted at the GA, according to the sub-action C.1.1. These indicators are performed in the corresponding Milestone at Annex 7.2.19 C.1 Mil Environmental indicators of implementation actions and will be validated during the project progress.

Moreover, Project Specific Indicators, approved at the GA, were uploaded on the online data collection tool http://life.idom.com, according to European Union announcement and validated. The environmental indicators will be monitored by this platform. The excel file document,

extracted by the Idom platform, is submitted at the Annex 7.2.20 C.1 Project Specific Indicators – Idom.

The indicators were defined qualitatively, since the most important environmental indicators will arise by the development and operation of SCs.

The environmental indicators of implementation actions and the impact of the Project progress will be included at the Final deliverable report titled as "1st Annual assessment report of the Project impact", with deliverable deadline at 31/12/2016 and will be submitted with the Midterm report at 31/10/2017.

The revised table of Project Specific Indicators constitutes Annex 7.2.56 E.2 Del Revised table of Project Specific Indicators at the corresponding Action E.2.

Progress

ECYCLE is responsible for implementation of this Action. Although the foreseen duration of Action D.1 was till June 2016, the status is indicated "in progress", due to the fact that the Action progress indicators include the ensuring of proper implementation of dissemination actions throughout the Project duration and validation of Dissemination plan per year.

In the context of this Action implementation, the logo of the Project was developed (7.2.22 D.1 Logo RE-WEEE), which was referred in every corresponding document to LIFE RE-WEEE, such as participant lists, presentations, reports.

Additionally, the dissemination plan of the Project results was developed (7.2.21 D.1 Del Dissemination plan), concerning the overall relevant activities to disseminate the results of the Project and proceed to information of the public and stakeholders. To facilitate dissemination activities of the Project, a database, including all categories of stakeholders (i.e. journalists, bodies and companies concerning WEEE management etc.), was developed (7.2.23 D.1 *Database of target – groups).*

Throughout the next months, and according to progress indicators of this Action, main communication messages for the Project basic principles promotion will be published.

Delays

The foreseen duration of the Action D.1 was set at GA till June 2016. There is a typical delay in publication of the 3 main communication messages. The Project team indicated the actual duration of this Action till the end of the Project and decided to promote these messages when the implementation of the Project is progressed, in order to be addressed in wider range of public.

Comparison with established targets

Progress

The implementation of this Action is in progress within the foreseen timetable. ECYCLE is responsible for implementation. LIFE RE-WEE website was developed and it is updated within the Project progress. Within the reporting period (January – November 2016), 7.214 views were reported at the corresponding Annex 7.2.25 D.2 Google Analytics report - LIFE RE-WEEE website.

Delays

Website was uploaded at early March (delay period of 1,5 months), due to erroneous estimation of time that the external assistant needed to develop the website. This delay did not affect the proper implementation of the project.

Comparison with established targets

Indicators of Progress	Target	Achievement
Project website development and	6/2019	Website upload on March 2016 (website
operation		operation will be maintained for at least 5
		years After LIFE, according to GA)

Progress

ECYCLE is responsible for this Action implementation. Although the foreseen inception of this Action have been set on the 2nd semester of 2017, two (2) informative banners (7.2.26 D.4 Del LIFE RE-WEEE banners) were designed and placed in all events, organized by RE-WEEE team (i.e. 1st Press Conference of the Project, 1st Consultation Forum, 2nd Consultation Forum, 1st Monitoring Team Audit). Two (2) updated and more technical informative banners will be developed, in order to be placed in the SCs, before their operation.

Delays

No delays have been performed during the Action implementation

Comparison with established targets

Indicators of Progress	Target	Achievement
Project promotion through 2 informative	12/2017	Development of 2 general informative
banners		banners, used at the Project events
Project promotion through 10	12/2017	December 2017
informative posters

Progress

Action D.5 is in progress as foreseen to the timetable. No individual sub-actions are performed in this Action. GF is responsible for implementation. All beneficiaries contributed in the development of a database containing relevant projects to WEEE management. So far the project's team has come into direct contact with 30 projects in total. This contact has been established through e-mails, web-meetings, exchanging information, participation in common events and organization of common events. Indicatively, the following networking activities are referred:

• In the context of the Zero Waste Municipalities Conference that held at Ljubljana at 21-22/4/2016, networking with FP7 project of the Universitat Politècnica de Catalunya -

Barcelona Tech has been carried out, for the creation of an open source platform (http://www.ereuse.org/en/) for the traceability of e-waste (IT equipment), at what stages it can be traced prevention, preparation for reuse, recycling.

- In April 2016, RREUSE representative participated in the final conference on transposition of the EU WEEE Directive into Spanish law, that includes a target on preparing for re-use of WEEE. Networking activities with the Project "ECORAEE" took place.
- The LAWPret project is an Erasmus+ program that provides training to local authority employees in Greece, Cyprus and Slovenia on waste prevention. LIFE RE-WEEE was presented by "Appliances Recycling S.A." at the LAWPret Local Authority waste prevention training seminars at the Municipality of Nikaia - Ag. Ioannis Rentis (17/5/2016), Municipality of Ag. Anargyroi – Kamatero (20/5/2016) and Municipality of Kifisia (10/6/2016) respectively. Moreover, LIFE RE-WEEE project participated at the LAWPret project final conference that was held in the Athens Chamber of SMEs industries (BEA) at 24/6/2016 as well. The conference was open to general public, and representatives from public bodies and private companies also participated, such as Local Authorities, Ministry of Environment & Energy, NGOs, waste management companies, Alternative Waste Management Systems and representatives from the Academic Community.
- A meeting was held with the "REPAIR CAFÉ" foundation's president and Director at 23-24/6/2016 in Amsterdam to discuss synergies between the events to be held in Greece and Repair Cafés' model, as well as the tools available in Greek to attract a
- The 2nd Open Consultation Forum took place in Nea Triglia Chalcidice in parallel with the 4th Working Group meeting on Energy Efficiency and Conference for the "Contribution of Local Authorities to the decrease of CO₂ emissions and the transition to Circular Economy" co-organized by the Municipality of Nea Propontida and "EGTC Efxini Poli", 22/9/2016. Detailed description of this event is given at the Action B.2.
- Participation of HUA, beneficiary of LIFE RE-WEEE, in the International Solid Waste Association (ISWA 2016) at 19-21/9/2016. HUA participated in a workshop organized in the context of the conference by the COST ReCreew project (European network for innovative recovery strategies of rare earth and other critical metals from electrical and electronic waste), and also in consultation about information in prevention and re-use of EEE issues and networking with other projects in related fields (e.g. COST ReCreew and LIFE CRM recovery project).
- Networking with the "REBus" Project (http://www.rebus.eu.com/) took place in the context of CRNI Conference in Dublin in 12/10/2016, by exchanging information among the participants.
- In the context of RREUSE WEEE working group (WG) dissemination of project objectives at a RREUSE meeting in Dublin (14/10/2016) took place, including discussion topics for the feasibility of stronger policy support for preparing for re-use activities of WEEE at both national and European level. EPA, University of Limerick (Department of Electronic and Computer Engineering) and "WISER" Life Project participated the meeting.
- Presentation of LIFE RE-WEEE project in the International Workshop of the LIFE WEEEN Models which was organized within the "Festival della Scienza", 1-3/11/2016. Networking contacts were made with all participating projects and experts (e.g. LIFE WEEENMODELS, LIFE MED, ECORAEE, University of Udine).

Within this activity, on 2/11/2016 a meeting with LIFE RE-WEEE representative and the representatives of the LIFE WEEENModels consortium – more specifically, representatives of T-Bridge, AMIU and the Municipality of Genova – was held, exchanging valuable data regarding the e-waste problem. Moreover, the participants exchanged information regarding the platform that is being developed in the framework of LIFE RE-WEEE, since LIFE WEEENModels has also developed a platform.

- Contacts with the "Restart Project" were made on November. "Restart Project" promote "pop-up parties" for electronics repair events. Discussions are currently underway to see what synergies may be created between the "Restart Project" and the LIFE RE-WEEE project, in order to find out how the LIFE RE-WEEE repair events can collect data and indicators that will be compatible with the "Restart Project" data-collection database and possibly to use the data indicators and any other available source to narrow down the household appliances which are most repairable and the range of the appliances to be included in the repair guide overview (see also Action B.6)
- Networking with the Life Project EWWR+ European Week for Waste Reduction took place by the participation of RREUSE representative in the EWWR and translation of the Spanish CO₂ calculator outlining the benefits of re-use, which includes electronic equipment categories in November 2016.
- Regular contact between RREUSE and "CloseWEEE" project occurs within 2016, especially concerning their Recycling Information Centre tool where RREUSE and members have been asked to comment.

The list of projects was established by the project's team during the first 3 months of the project implementation. This list is dynamic and will be will be enriched within the Project progress. The relevant list, the status of communication and the way of communication are submitted as Annex 7.2.27 D.5 Mil Database of related to WEEE projects of this report in the form of a table. More specifically, the project's team has established contact with 16 projects directly related to WEEE and 14 more projects indirectly related to WEEE (waste management projects).

Finally, in the context of the Action implementation, two (2) accounts in social media (Facebook, twitter) were created targeting to information exchange and dissemination of the Project progress.

The relevant list of projects and the type of networking activities conducted shall be recorded in the report containing the development of the relevant network which is to be submitted by 01/2019 according to the GA.

Delays

No delays have been performed during the Action implementation

Comparison with established targets

Indicators of progress	Target	Achievement
Number of projects contained in the developed network database and contacted by the project's team	50	76
Number of projects response	38	30

Number of likes in Facebook	1000	207
Number of followers in Twitter	200	28

D6	Foreseen															
D0	Actual	•	•	•	•	0	0	0	0	0	0	0	0	0	0	

Progress

The Action is in progress within the foreseen timetable. ECYCLE is responsible for implementation. Action D.6 is composed by two sub-actions.

In the context of sub-action D.6.1, the 1st Press Conference was organized by the Project team at 11/5/2016 at the Ceremony Hall of Harokopio University of Athens (7.2.29 D.6 Photos of 1st Press Conference). Journalists from newspapers and "skai TV" channel joined the event (7.2.30 D.6 Journalists' participant list). The 1st press release (7.2.31 D.6 1st press release) was delivered and published in Mass Media, as presented in Annex 7.2.28 D.6 Del Publications in Mass Media - Interviews, and a short presentation of LIFE RE-WEEE Project was presented at the TV show "econews" on skai TV channel. Moreover, Prof. Lasaridi, representative of HUA, gave an interview at the National TV channel in the TV show "ON EPT" (7.2.28 D.6 Del Publications in Mass Media - Interviews), introducing the benefits of prevention of WEEE project was published at a weekly newspaper "ΚΕΦΑΛΑΙΟ" (7.2.28 D.6 Del Publications in Mass Media - Interviews).

Sub-action D.6.2 includes, among others, the development and printing of LIFE RE-WEEE leaflets (18.000 Greek and 6.000 English leaflets, according to GA). The Project team decided to proceed in printing half of the foreseen number of leaflets, concerning general description of the Project in both languages (12.000 leaflets in total). Since the beginning of SCs operation, a new more technical leaflet will be developed and printed. The 1st version of the Project leaflet is under development.

The 1st newsletter is under development and will be released via e-mail at early of January, including information concerning the 1st year of Project implementation.

Delays

A delay of Project leaflet development was presented, due to the fact that the project team had to decide about the copies of the leaflet, as described above and bad estimation of the time for

the leaflet development needed by the external assistant. Moreover, the release of the 1st newsletter was delayed, since till the deadline at 6/2016, according to GA, few activities of public interest had performed. For this reason, a newsletter for the 1st year of the project implementation will be released. The next newsletters will be developed and distributed to stakeholder every 6 months, according to GA.

The delays described above did not affect the proper implementation of the project, as the promotion of the project progress is carried out through other media.

Comparison with established targets

Indicators of Progress	Target	Achievement
2 Press conferences in the beginning and in end of	2 Press conferences	1 st Press Conference at 11/5/2016
the project		
Project video production	1.000 views	After SCs operation
30 articles in printed and electronic press and 10	75.000 audience	8 publications, 1 interview and 1
interviews		reference at TV show till reporting period
Distribution of informative material	3.000 leaflets	Till the end of the project
7 newsletter	5.000 receivers	1 st newsletter release till reporting period

D7	Foreseen															
D7	Actual	•	•	•	•	0	0	0	0	0	0	0	0	0	0	

Progress

The progress of Action D.7 is performed within the scheduled timetable. HUA is responsible for Action implementation. To achieve the goal of Action D.7, four (4) communicational tools - categorised into sub-actions of equal number - are/will be implemented:

- Technical publications in scientific journals (Sub-action D.7.1),
- Participation in conferences, exhibitions, and seminars (Sub-action D.7.2)
- Organisation of two seminars regarding the results and lessons learnt throughout the implementation of the Project, with stakeholders as target audience (Sub-action D.7.3)
- Organisation of six meetings with the RREUSE network, with ultimate goal the presentation and assessment of the Project (Sub-action D.7.4).

Three (3) out of the four (4) Sub-actions of D.7 are set to start in later phases of the Project, following the first resulting outputs of the technical core Actions (i.e. group of Actions B, anticipated to start within 2016 and to produce the first outputs in 2017), and Actions relevant to the Project monitoring (i.e. C.1, C.2, E.2, and E.3).

Sub-action D.7.2 (participation in conferences, exhibitions, and seminars) was set to initiate in the early stage of the Project, on the basis that it would diffuse the concept of the Project within the scientific and technical community worldwide, most effectively. Throughout the reporting period of time (January – November 2016), the LIFE RE-WEEE project and its so far results have been presented in the following conferences:

- RECIS 2016 2nd International Conference "Recycling in Island Regions", 13 14 May 2016, Santorini, Greece (one presentation in Greek).
 - Presentation Title: "Good practices of WEEE treatment, with focus on the principles of prevention and preparation for reuse."
 Speaker: Ch. Angelakopoulos

The programme of the conference, the submitted paper and the presentation are provided as Annexes 7.2.32 - 7.2.34.

- CYPRUS 2016 4th International Conference "Sustainable Solid Waste Management",
 23 25 June 2016, Limassol, Cyprus (peer reviewed scientific conference one presentation).
 - o Presentation Title: "The LIFE RE-WEEE project Development and demonstration of waste electrical and electronic equipment (WEEE) prevention and reuse paradigms"

Authors: K. Lasaridi, C. Chroni, K. Abeliotis, M. Intzeler, Ch. Angelakopoulos The programme of the conference, the submitted paper, the presentation, and pictures are provided as Annexes 7.2.35 - 7.2.38.

- NSRF (ΕΣΠΑ), European Programms and Municipalities of Attica prefecture 3rd Educative Workshop (audience: employees of municipalities of Attica prefecture), 31 August 2016, Athens (one presentation in Greek).
 - Presentation Title: "LIFE RE-WEEE Development and Demonstration of Waste Electrical & Electronic Equipment (WEEE) Prevention and Reuse Paradigms (LIFE14 ENV/GR/000858)"
 Speaker: Konstantina Kalafata

The programme of the conference, the presentation, and pictures are provided as Annexes 7.2.39 - 7.2.41.

- IHWM 2016 5th International Conference "Industrial and Hazardous Waste Management", 27 30 September 2016, Chania Crete, Greece (peer reviewed scientific conference two presentations).
 - Presentation title: State-of-the-art review on waste of electrical and electronic equipment reuse in the framework of the LIFE RE-WEEE project Authors: K. Lasaridi, C. Chroni, K. Abeliotis, M. Intzeler, Ch. Angelakopoulos
 - o Presentation Title: Development and demonstration of waste electrical and electronic equipment (WEEE) prevention and reuse paradigms

Authors: K. Lasaridi, C. Chroni, K. Abeliotis, M. Intzeler, Ch. Angelakopoulos The programme of the conference, the submitted papers and the presentations are provided as Annexes 7.2.42 - 7.2.46.

The initial target was the participation in twelve (12) conferences and nine events (seminars, exhibitions, workshops) throughout the Project implementation (42 months). Within the first eleven (11) months of implementation, and while the core Actions of the Project are still in progress, the Project and results from its early phase were disseminated through participation in: two (2) International peer reviewed scientific conferences, one (1) National conference, and one (1) Educative workshop. An overview of the achievements of Action D7 is presented in Table 1.

Up to December 2016, abstracts will be submitted to the following three (3) International Conferences:

- 1. CEST 2017 (15th International Conference on Environmental Science & Technology, 31 August – 2 September 2017, Rhodes, Greece),
- 2. ATHENS 2017 (5th International Conference on Sustainable Solid Waste Management, 21 - 24 June 2017, Athens, Greece), and
- 3. CEMEPE 2017 (6th International Conference of Environmental Management, Engineering, Planning and Economics, 23 – 26 June 2017, Thessaloniki, Greece).

Delays

No delays have been performed during the Action implementation

Comparison with established targets

Indicators of Progress	Target	Achievement
Number of participations in conferences	12 conferences	3 conferences (up to November 2016)
Number of participations in events (seminars, exhibitions, workshops)	9 events	1 event (up to November 2016)

Progress

ECYCLE, as Coordinator of the Project, is responsible for this Action implementation. Action E.1 is in progress within the foreseen timetable.

The sub-action E.1.1 includes the preparation and submission of the reports to E.C.. Till the reporting period, 11 monthly reports for the Project progress have been delivered to Monitoring Team Auditor, and the present Progress Report for the period time from January 2016 to November 2016 (11 months). Within this period, the Coordinator beneficiary monitor the proper implementation of the Project concerning the technical and financial issues. Beneficiaries' expenses documents are collected in a timeframe of 4 months by the coordinator, by filling the excel file of Individual Cost Statement and copies of financial documents (invoices, payments etc.). For dissemination and exchanging data among partners, a public site (dropbox) was organized.

In the context of sub-action E.1.2, three (3) ACP meetings have been performed, including the kick-off meeting, and meetings among partners for the proper implementation of the project, as it is described analytically in the Charter "4. Administrative part". During the kick-off meeting, the members of the supporting groups of the ACP were determined, and the members of ACP were revised, since the beneficiary GF was not represented according to approved proposal. The final recommendation of groups is presented at the *Diagram 1 Project Organization Chart*.

Delays

Progress

Action E.2 is in progress within the foreseen timetable. ECYCLE is responsible for the Action implementation.

The development of Quality Assurance and Quality Control Handbook (7.2.55 E.2 Del Quality Assurance and Quality Control Handbook) was developed on time by ECYCLE, under which the assessment of the project progress reports are produced at the end of each year, by reporting financial and technical issues of the project progress for 12 months. The Handbook is divided to Management and Technical Part. Moreover, the Project Specific Indicators are monitored within this Handbook and their validation once per year as well. The table "QA-QC_Expenditures Summary" (Table 5 of QA-QC Handbook) arises by the summarizing of tables "QA-QC_Expenditures per Beneficiary" (Annex I of QA-QC Handbook), where each beneficiary fill in. These tables divides all budget categories per Action and were used (within reporting period of 11 months), in order the $\Sigma \varphi \acute{a}\lambda \mu a!$ To $\alpha \rho \chi \epsilon \acute{b} e \nu \delta \rho \acute{b} e \nu \delta \rho \epsilon \ell e \nu \delta \rho \epsilon \ell e \nu \delta e \nu \delta \rho \epsilon \ell e \nu \delta e$

During the reporting period, QA/QC Group proceeded in validation of the Project Specific Indicators in order to present in common data with the excel raised by Life-Idom platform. The revision of indicators concerns tools for reaching/raising awareness of the general public. The

revised table of Project Specific Indicators is presented at the Annex 7.2.56 E.2 Del Revised table of Project Specific Indicators. In this table, data within the reporting period have been filled in, concerning "Governance", "Information and awareness" and "Capacity building" fields. The other Indicator fields are connected with the SCs operation, thus in the current period no data could be filled in the table.

The final report of Project progress assessment is foreseen to be delivered at 31/12/2016 and will include the revised table of Project Specific Indicators.

Delays

No delays have been performed during the Action implementation

Comparison with established targets

Action E.3: Monitoring of Project Carbon footprint

Foreseen start date: January 2016 Actual start date: January 2016

Foreseen end date: June 2019 Actual (or anticipated) end date: June 2019

Status: In progress

Project	Project actions 2016						2017 2018 201									19
E3	Foreseen															
20	Actual	•	•	•	•	0	0	0	0	0	0	0	0	0	0	

Progress

Action E.3 is in progress according to foreseen timetable. HUA is responsible for the Action implementation. The CFG is comprised of one representative from each beneficiary, according to the "Diagram 1 Project Organization Chart". The CFG members are responsible for the overall supervision, monitoring and assessment of the Project's carbon footprint, as well as for the development and implementation of activities, which will lead to the mitigation of the Project's carbon footprint.

The Sub-actions are being implemented by a working group (Project employees), which is assigned, guided and monitored by the CFG. Within the reporting period, one (1) meeting of CFG members and members of the working group, was held in Harokopio University at 13/6/2016. The meeting addressed the following issues: comments on the definition of the handbook content, the emission factors of equivalent CO₂ for the activities related to the project and the calculation of Project activities' emissions (7.2.58 E.3 Participant list of CFG meeting) Throughout the reporting period, the following activities per Sub-action were conducted:

Sub-action E.3.1includes the development of a handbook (7.2.57 E.3 Del Handbook of CO2 emissions estimation) to facilitate the estimation of the Project actions' CO₂ emissions. The guide includes the definition of the Project's activities which have to be considered for the calculation of CO₂ emissions, and their functional limits.

Sub-action E3.2 is based upon the guidelines of E3.1. The CFG and the working group identified – by the means of literature research - the factors that will be used for the "interpretation" of each activity into CO_2 emissions. The factors are presented in excel file (7.2.59 E.3 CO2 Factors), which accompanies the guide for the estimation of the Project actions' CO_2 emission. The CFG is responsible to periodically review and – if needed – modify them.

Sub-action E3.3 includes the collection of data about the activities of each Action by the CFG and/or the working group of E.3, which should be considered for the calculation of CO₂ emissions, throughout the reporting period. For instance, in the case of travel, data about the distance, the transportation means, and the meals were recorded.

The collected data was utilised in order to calculate CO₂ emissions according to the following formula:

[data of a certain activity] * [factor of emissions] = $[CO_2 \text{ emissions}]$.

During the reporting period, no major issues have been encountered during the implementation of Action E3. The annual report for the project's carbon footprint will be delivered in the end of 12/2016, as anticipated.

Delays

The draft version of the handbook was delivered to the CFG in March 2016 for remarks and comments. The handbook was completed by early April. However, during the 1st meeting of the CFG members and members of the working group (13/06/2016), minor revisions were made concerning mainly the definition of the factors. This short delay as well as the minor revision had no impact on the Project's implementation, as the draft versions of the guide and the excel file were functional, providing reliable results.

Comparison with established targets

Indicators of Progress	Target	Achievement
A handbook for the estimation of the Project	March 2016	April 2016
actions' CO ₂ emissions

Progress

This Action is scheduled to be implemented the last trimester of the Project. Thus, it does not fall in the reporting period of the present report.

Envisaged progress until next report 5.2.

As it was described above, the project implementation goes through the 11th month of the total duration and most of the Actions are in progress. The next report (Midterm report) is foreseen to be produced at 10/2017. For the period time till the next report, most of the Project Actions, and especially Implementation Actions (B) will be progressed in parallel. More analytically:

- Action A.1 will be revised according to the questionnaires that will be received till 9/12/2016.
- Dissemination Actions will be implemented according to dissemination plan (Action D.1 – Annex 7.2.21 D.1 Del Dissemination plan)
- Within Action B.1.1 the recording measurement methodologies of re-use and preparing for reuse will be reported at the comparative analysis report, after collection of data and questionnaires.
- The 3rd Open Consultation Forum (Action B.2) will be organized when the call of interest will be launched.
- Questionnaires concerning Action B.3 will be developed, in order to be distributed to stakeholders.
- 6 technical specification files will be developed in the context of Action B.4:
 - One (1) general management specification file
 - o Five (5) special management specifications files for preparing for reuse of each WEEE category (except lamps)
- In the context of Action B.5, the following activities will take place:
 - o Call of interest for Municipalities selection conducted by GF
 - o Contest for contractors selection for SCs operation conducted by ECYCLE
 - o Final Management Plan for each SC
 - o A guide for WEEE management good practices for SCs' employees training
- Action B.6 will be in progress by:
 - o Implementation of the web platform for donating and exchanging EEE
 - Development of a repair guide
- The 1st report of Project impact assessment will be developed (Action C.1)
- The 1st report of Project progress assessment will be developed (Action E.2)
- The 1st report of Project CO₂ emissions will be developed (Action E.3)

The continuous informing of Monitoring Team concerning the total project progress will take place through the monthly reports, as parts of Action E.1.

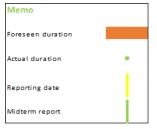

Diagram 2 Gantt Chart

5.3. Impact

Environment & Resource Efficiency: The current progress of LIFE RE-WEEE project has no direct environmental impact, since the operation of SCs and the donation platform have not started yet, and the "repair events" are foreseen to be organized from the end of 2017.

Since prevention of WEEE production and preparing for re-use are found in very early stage in Greece, the project expected results is estimated to have significant positive environmental impact in the regions of interest (Attika and Central Macedonia) where the two SCs will be located and operate, and to other areas that will develop corresponding infrastructures and activities, as the operation of SC down in the existing legislation (K.Y.A H.Π. 23615/651/E.103/2014 in compliance with Directive 201/19/EU). The project environmental impact arise firstly by the restriction of WEEE production through prevention and preparing for re-use, by reduction of raw materials, energy and resources for the for the production of new products on the other, and limitation of greenhouse gasses production raised by production of new products or WEEE treatment as well.

More analytically, it is estimated that during the project duration, 310tn of WEEE (categories 5 and 6) will be prepared to be re-used through the operation of the two SCs. This is equal to a prevention of 5.470tn CO₂ emissions and savings of significant quantities of raw materials and resources. The referred quantities described above will be validated after the SCs operation and the product mix of the equipment that will be prepared for re-use.

The estimated quantities of WEEE that will be prepared for re-use concern the pilot operation of the two SCs. Hence, by the implementation of the project results in other areas throughout the territory, the environmental impact that will arise will be very significant. Moreover, the collaborative web-based platform for EEE donation and exchange will also significantly contribute to WEEE prevention, taking into consideration the nationwide operation of the platform.

Indirect impacts: The implementation of project results, after the pilot operation of the two SCs, will bring about many benefits to the Municipalities that declare interest in the development of new SCs in their boundaries, according to the technical requirements and specifications, developed by LIFE RE-WEEE. Municipalities will implement good practices of WEEE management through sorting and therefore the preparing for re-use of WEEE, resulting in positive environmental impact and achievement of EU target concerning waste reduction. The development of integrated facilities for WEEE sorting including or in collaboration with preparing for re-use facilities (services) will create new green jobs, will improve the know-how of the employees and could organize educational workshops to schools and other social groups. Moreover, as it is foreseen in the project, Municipalities could donate or provide in very low cost the re-used equipment in social groups in need. Finally, local authorities could take advantage of these facilities to collect all streams of waste, in order to proceed in environmentally sound management of produced wastes.

On the other hand, the development of a preparing for re-use measurement methodology based on the existing best methodologies, constitute main objective of LIFE RE-WEEE. The future implementation of this tool in all EU-members will be supporting in quantification of re-use and provision of corresponding data to reports to EU, facilitating in the adoption of binding quantitate targets concerning preparing for re-use and re-use at future amendments of WEEE Directive 2012/19/EU.

Table of indicators: The overall revised table of Project Specific Indicators is referred in the corresponding Action E.2 as Annex 7.2.56 E.2 Del Revised table of Project Specific Indicators.

As it was described in Action E.2, the indicators concerning "Governance", "Information and awareness" and "Capacity building" fields have been revised and comprise calculable data raised within the reporting period. Only the described indicators above are examined till the current period "Table 18 Table of Indicators" gathers all the collected data, focusing in the fields of interest.

The comments marked with orange colour referred to the revised fields. The column "State-of-play at the progress reporting period till 30/11/2016" referred to the collected data within the reporting period.

It is assessed that the set indicators, concerning the described fields constitute achievable indicators, and in some cases have already been exceeded (e.g. "other media (video/broadcast")), even though the project progress undergoes the 1st year of implementation. QA/QC Group, which is responsible to monitor the Project progress and to collect all data relative to the overall project progress assessment, aims to achieve the set indicators or to revise them in case of not responding to real data.

The other indicators are not fall in the reporting period of the present report, due to their connection with the SCs operation or the donation platform. No data could be collected, for example, concerning the waste prevention, and therefore reduction of CO_2 emissions, as corresponding activities are foreseen to be implemented within the 2^{nd} year of project duration.

Table 18 Table of Indicators

Progress report LIFE 43

Policy implications: LIFE RE-WEEE targets are in compliance to the existing EU targets and priorities, concerning reduction of wastes and maximization of re-use, as prescribed in the current EU legislation and the 7th Environment Action Programme (EAP) to 2020. The objectives of the project fall also under the new EU Action Plan for the Circular Economy and its basic principles.

Although, LIFE RE-WEEE Project is in line with the EU targets, obstacles were addressed concerning the development of SCs, since the existing National legislation framework did not provide the specific requirements for the appropriate environmental authorization of these facilities

However, as described in details at the chapter "3.3 Identified deviations, problems and corrective actions taken in the period" and at the corresponding Action B.5, Project Team tackle these restrictions when was feasible. More specifically, after cooperation of HRA, representative of LIFE RE-WEEE, and the Department of Recycling - Alternative Management of YPEN, amendment of M.D. 1958/2012 by M.D. 37674/2016 was achieved. SCs were classified in the relevant group of facilities and included in Group 4 "Environmental Infrastructure Systems" as "Sorting Centers of Electrical and Electronic Equipment (WEEE) -Including facilities for preparing for reuse of WEEE (category "9y"). Moreover, current National legislation puts restrictions in settlement of waste management facilities (collection, sorting, storage, treatment, disposal etc.), such as SC, outside the districts of the defined Urban Plan, according to PD 31/1985, or inside industrial areas according to PD 166 D/1987. For this reason, LIFE RE-WEEE Project, represented by HRA, made efforts in order SCs to be included at the same spatial framework with Green Recycling Centers with the cooperation of the General Secretariat for Regional Planning and Urban Development of YPEN. Due to the activities that take place in SCs, a special spatial framework for SCs is under development with the contribution of LIFE RE-WEEE Project, in order to facilitate the development of further SCs, out of the Project frame.

Additionally, in the context of LIFE RE-WEEE actions, a specification issue will be prepared, based on the developed technical requirements and specifications for preparing for re-use within the project duration, and will be proposed to the Ministry of Environment & Energy aiming to eventual integration in the National legislative framework.

5.4. Outside LIFE

According to current National legislation framework and the National Waste Management Plan, local authorities provide for "Green Points" siting within their boundaries as part of their Local Waste Management Plan. Project team, in the context of the project, has carried out visits to Local Authorities of interest (region of Attika and Central Macedonia) by informing them in detail for the LIFE RE-WEEE progress and especially regarding SC siting requirements. During the meetings, Project team provides in parallel guidance and advice Local Authorities regarding the eventual integration of SCs in the "Green Points" that have already been designed and are going to operate. By this way, Municipalities could proceed in environmentally sound overall management of the produced wastes. This procedure falls in the scope of project objectives for WEEE reduction through sorting and preparing for re-use on the one hand, but concerns activities out of framework of the LIFE project on the other, since "Green Points" facilities have not be developed yet.

6. Financial part

This chapter includes confidential financial data of each partner, which are not publishable.
